

PROJECT REQUIREMENTS

Project Name

TAILORED DIET

Functional Requirements

Diet Plans:

This is the essence of the website. These are the tailored diet plans for certain health conditions.

User Information:

Users will be able to sign up with their personal information.

Medical Records:

This will be filled by the user with their correct medical condition and also the medications they are on, that will help give them the tailored diet plan for their condition.

See an Expert:

This will be where the user can ask to book an appointment with a dietician for an extra help with the diet and also an appointment with a certified therapist for those battling mental health issues and need extra help.

Chatroom:

This is where the community can have sincere conversations with those going through the same situation as they are. This is also to help tackle the stigma. This will also be anonymous.

Blogs:

This will help inform the users in the community on any new development. Keeping them in tune with their world.

Creating Account:

The different members in the community will be able to create the account that best suits them. Currently it is just two: a client and an expert.

Technical/Performance Requirements

This project will involve the development of a website that will hold the features that are listed above. This website will comply with performance best practices for best optimization.
